

## THE IONZA ALKA JUG:

- turns ordinary tap water into alkaline, ionised water
- reduces chlorine and limescale content
- absorbs heavy metals such as lead and copper
- filters 300 litres per cartridge
- displays filter cartridge life on digital display

## WATER FROM THIS JUG IS:

- alkaline
- antioxidant
- mineralising
- clear
- refreshing
- great-tasting

Many common health issues resulting from excess acidity in the body can be relieved by regular consumption of alkaline ionised water.

Available in 3 Colours

BPA-free

## COMPONENTS:

- Filter cartridge life indicator
- Lid
- Funnel reservoir
- Replaceable filter cartridge
- Jug with measuring scale

## TECHNICAL SPECIFICATIONS:

- Digital indicator showing cartridge life
- Streamlined contemporary design with contoured handle – easy to lift and pour
- Capacity: 2 litres
- Cartridge life: 300 litres water (saves purchase of bottled drinking water)
- Jug material: AS
- Lid, funnel, handle material: ABS
- Cartridge housing material: PP
- Cartridge Media: Active Carbon, Ion Exchange Resin, Negative Potential Particles, Far Infra Red (FIR) Beads, Natural Bio Minerals
- Offers alkalisng minerals. Delivers water with pH 8.5 – 9.5 to support systemic pH balance in the body
- Provides low negative ORP: –100mv to –200mv, transforming regular water into antioxidant water
- Reduces molecule cluster size for optimum absorption
- Recycling of cartridge for zero waste: Cut open cartridge, use content in compost and recycle plastic
- Warranty: 6 months limited warranty on LCD indicator

**CONGRATULATIONS** on the purchase of your Alka Jug. The jug is designed to offer you properties that help the body detox, eliminate acidity and reduce the chance of inflammation in the body.

## DRINKING IONISED ALKALINE WATER:

To get optimal benefit we recommend drinking 1.5 -2L/day. You get the most benefit when you drink the water fresh. Fill bottles to support you throughout the day. To preserve the health properties best, use a vessel that you can cap.

## BEFORE USING:

- 1 Clean all components of the Alka Jug. All parts can be washed in dishwasher except lid - clean the lid by hand.
- 2 Clean surface of filter cartridge, then screw it firmly into the bottom of the funnel reservoir of the jug. Place the unit into the jug.
- 3 Fill the funnel reservoir with water and let the water filter into the jug. Discard the water and repeat the entire process. This will rinse away any loose activated carbon particles and prepare the filter cartridge for use. NOTE: Carbon particles are not harmful to consume.
- 4 The jug can be filled with 1.5 litres of water at a time. When this has passed through the cartridge into the jug it is possible to fill the reservoir more as the jug itself has a capacity of up to 2.5 litres. (Do not overflow the reservoir or water will flow out into the handle.

- 5 Set up the electronic cartridge life indicator:

5a Press the button and hold it down for a few seconds until symbols appear on the screen. Release the button and the blinking symbol for users appears on the screen.

5b Case 1: Four faces and cartridge icon (with cross through) are blinking: double click button (a fast double click), in order to find one user (smiley face) blinking, this allows you to change the number of users. Go to 5c

Case 2: One user is blinking. Go to 5c

- 5c Set the number of users by pressing the button again until the desired number of users is displayed. (Maximum is 4).

5d Next, press the button and hold it down for a few seconds until symbols appear on the screen. The indicator is activated. NOTE: The indicator will cut off if the button is not pressed within 30 seconds of programming the timer. If this happens, repeat the steps above.

To turn off the LCD display: Press the button and hold it for 20-30 seconds until the LCD display turns off.

## REPLACING THE FILTER CARTRIDGE:

When the blinking warning symbol ('X') appears on the cartridge image in the display, it means that the filter cartridge should be replaced within one week. As the week passes, all symbols on the screen start blinking reminding you that filter cartridge life has expired. Replace the filter cartridge.

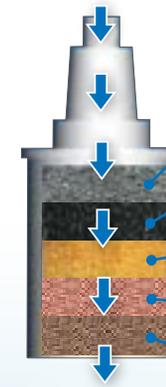

- 1 Unscrew the filter cartridge from the funnel reservoir
- 2 Screw the new cartridge into the funnel reservoir and repeat steps 2) to 5) under Before Using.
- 3 Re-set and re-activate the indicator as before.

- You can easily change the number of users by entering the users' setting mode: quickly double press the button, then repeat steps 5b and 5c. When the number of users is changed, the cartridge life is recalculated automatically.
- Keep replacement cartridge in the original sealed wrapper while not in use and store in a dry cool place.
- When filling the funnel reservoir, do not place filter cartridge opening directly under the running water.

### NOTE:

Wash your jug and funnel reservoir regularly with soapy water, rinse, and dry with a soft cloth.

For the lid to hold well on the jug, the reservoir needs to be aligned with the jug's top edge

## CARTRIDGE MEDIA:

Negative ion ceramic balls: alkaline ionized water with pH 9.5, -150mv ORP;

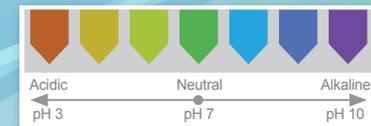

Activated Carbon: removes chlorine, odour, colour, purifies water

Ion exchange resin: softens water for better taste.

FIR beads: for smaller cluster size

Natural Bio minerals: up to 90 different minerals and trace elements

**pH TESTING:** The cartridge life is accurately tested by using pH drops (Ionza pH test bottle): pour 20ml of Alka Jug water into a glass, add 2 drops of testing liquid, and mix. The resulting colour should be blue or purple, indicating an alkaline reading of pH9 to 9.5. When the colour becomes turquoise, the cartridge is exhausted, and needs replacing. Testing means you will get the most life from your cartridge. Please note: if your water source is acidic, water from the Alka Jug won't be as alkaline. It is possible to put the water through the Alka Jug twice to achieve higher alkaline levels. Test your source water for pH to see the difference.

**HEALTH:** Alkaline Ionised water supports the body in a variety of ways to achieve good health. The alkaline minerals are used to create alkaline buffers, the body's natural process for buffering and eliminating acidity from the tissues. Accumulation of acidity encourages the development of inflammation which underlies the majority of adult illnesses. Water from your jug also offers you antioxidants as well as better hydration. Water is best drunk at room temperature rather than refrigerated as this cools down the digestive system. There may be detox symptoms when drinking the water in the first few days.

**COOKING:** You can also use the alkaline water for cooking wonderful soups, stocks, rice and pasta.

enjoy !
